

# Fossil- Power Top 50

To highlight key powerful players within Canada's fossil fuel industry, the Corporate Mapping Project developed the Fossil-Power Top 50. The Fossil-Power Top 50 lists the most influential organizations in and around the Canadian fossil fuel sector. The Fossil-Power Top 50 was assembled over the past four years as our team conducted extensive research on the economic organization of the industry and its reach into wider society.

This listing includes extractive corporations, many of whose names we recognize—but it also includes enablers and legitimators. Enablers are organizations that directly support fossil fuel production, and legitimators are influential organizations that facilitate or promote continued expansion and dependence on fossil fuel extraction.

These Western Canada-based corporations extract fossil fuels (oil, gas, coal), transport them and/or process them. These are the Canadian extractive corporations with the greatest emissions footprint (including end-use emissions when extracted fossil fuels are consumed).
